

# FEACAL SLUDGE MANAGEMENT

# ISSUES RAISED

- No body seems to be in charge of the service chain much as the NWSC and UOs are in charge of the O&M of the FSTPs
- **Need for a comprehensive baseline/study on the operation performance of the existing FSTPs (including quality of the effluent & by-products)**
- Need for small scale FS systems in the towns (Distances are still long)
- Need for Packaging some of the systems along the service chain together
- **Need for a Management Framework for the FS Service chain**
- Partnership with NGOs and other partners
- Need of Business plan for FS service chain
- Upscale MOU initiative
- Demand creation
- Incentives/ Subsidies
- Operationalization of the FSTPs
- Completion of the FSM guidelines / Linkage with the proposed baseline
- Who is the Champion in the MWE? There is a Sewerage Division -AC in the Ministry not yet filled.
- Enforcement is weak
- More solutions in Emptying technologies
- Mapping of the appropriate technologies in different areas

# AGREED ACTION

- Conduct a baseline on the operation performance of the existing FSTPs and develop Management Framework for the Faecal Sludge Service chain (Including Business aspects)
